The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 39,46,48 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The limitations of each of claims 39,46,48 are new matter.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Solikamask Ta<sub>2</sub>O<sub>5</sub> recited in the IDS filed February 18, 2003.

The taught tantalum pentoxide appears to be substantially identical to that instantly claimed since it has a BET surface area and a density within that instantly claimed for that formed by the NH<sub>4</sub>OH precipitation process.

Where the claimed and prior art product(s) are identical or substantially identical, the burden of proof is on applicant to establish that the prior art product(s) do not

Art Unit: 1754

necessarily or inherently possess the characteristics of the instantly claimed product(s), see *In re Best*, 195 USPQ 430.

Applicant's arguments filed August 4, 2003 have been fully considered but they are not persuasive.

Claim 39 is not supported by instant pg. 20 because it recites the packed bulk density being either 0.9 to 4.0 or 2 to 4.

Claim 46 is not supported by instant pp. 19,20 because they do not recite a BET surface area of 3.0 to 17 for a calcined product. They instead recite  $\geq 3$  to  $\geq 11$ .

Claim 48 is not supported by instant pg. 19 because it recites 0.75 to 3.0 for the packed bulk density.

Claims 24,25,47,49-56 are objected to as being dependent on a rejected base claim.
